To,
The Recruiting Team,
Duolingo

I am a student pursuing Masters in Computer Science at Stony Brook University, Stony Brook, NY. I will be graduating in December 2016.

I am passionate about developing products that can enhance the lives of consumers all around the world. Finding new innovative ways to make things smarter, faster and automatic is my fascination.

I interned in Summer 2016 in Cloudera, Palo Alto, US, where I developed a full stack web application which eases the process of building and managing clusters. The application was built using Python(backend) and KnockoutJS(frontend).

I have 4 years of experience in C++ development before I started my Masters program. I worked for two years in Goldman Sachs on low latency applications where time of the order of microseconds played a crucial role in deciding whether orders executed at the exchange or not.

I also worked in Adobe Systems for 2 years where I was part of licensing team at Adobe and we developed components that were a single point of entry for licensing all of Adobe products.

I have thoroughly enjoyed my experience here at Stony Brook till now where I have learnt a lot about Systems and extensively worked on Kernel Development. The courses, Operating Systems, Analysis of Algorithms, System Security and Network Security have widened my knowledge in the systems field and inclined me to work in those areas.

With my interests and experience, I believe I would be the right candidate for "Software Engineer" role at Duolingo.

Sincerely,
Aadarsh Jajodia
